Assessment

Following are the modules:

1. Signup Screen
2. Login Screen
3. Profile Screen
4. Update profile Screen

Description

Default page will be sign up Page, Use backend server(apis) and database to store the data. After signup, redirect the user to the login page.

After login - store jwt in either cookie or local storage or in parent component state and redirect user to Profile page.

After updating profile - redirect the user to profile page. After logout, the user redirects to the Sign Up screen and clears the jwt token. **Details:**
